class Sector

This class will implement the string -> long long --> string conversions That's necesary because the disk's size is returned in long long and we want to read, and write to XML This is part of libbslxml right now. More...

List of all Methods	

Public Methods

- **Sector** ()
- **~Sector** ()
- QString **toString** (const sector bytes)
- sector **toSector** (const QString text)
- QString **convenient** (const sector bytes)
- QString **correctZeroes** (const long number_to_fix, const long limit)

Public Members

- static const long **FACTOR**

Detailed Description

Sector ()	**Sector**
~Sector ()	**~Sector**
QString **toString** (const sector bytes)	**toString**
sector **toSector** (const QString text)	**toSector**
QString **convenient** (const sector bytes)	**convenient**
QString **correctZeroes** (const long number_to_fix, const long limit)	**correctZeroes**
static const long **FACTOR**	**FACTOR**
